

DECOMMISSIONING

DOCAN supports major infrastructure decommissioning projects across various sectors to ensure they are undertaken as safely and efficiently as possible.

CORE CAPABILITIES:

- ✓ Decommissioning activity evaluation
- ✓ Concept & feasibility studies
- ✓ Finite Element Analysis
- ✓ Heavy Lift Design
- ✓ Structural Analysis
- ✓ Detailed engineering
- ✓ Fitness for Service Assessments

LEARN MORE

HOW WE CAN HELP

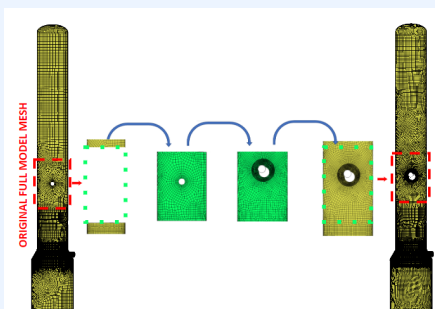

Through our deep understanding of the complex processes and systems involved in dismantling critical assets and large-scale structures, we can accurately determine the suitability of lifting or removal projects and ensure the asset remains fit for purpose throughout.

We have extensive experience working across various high-integrity industries where our skills are invaluable to the overall success of the project.

Working on a consultancy basis we can provide a team of highly equipped specialists as and when you need them to assist in safely and successfully completing any decommissioning tasks.

KEY PROJECT

DECOMMISSIONING ASSESSMENT OF A PRESSURE VESSEL

OIL & GAS

- ✓ Decommissioning assessment of a large +400 tonne, 65m tall pressure vessel to verify structural integrity
- ✓ Assisted in the planning, preparation and engineering of the lifting activity for safe execution
- ✓ Existing DOCAN Finite Element models and historical mesh files utilised and adapted to analyse the complete vessel
- ✓ Vessel verified and a detailed heavy lift plan produced
