

PROCESS ENGINEERING

DOCAN provides expert process engineering services to clients within the chemical, petrochemical, and other similar industries, helping them solve problems, enhance efficiency, and achieve their goals.

CORE CAPABILITIES:

- ✓ Pressure relief & safety systems
- ✓ Energy optimisation
- ✓ Front-End Engineering Design
- ✓ Process hazard & safety assessments
- ✓ Piping & Instrumentation Design
- ✓ Steady state & transient modelling

HOW WE CAN HELP

DOCAN have unrivalled experience in assisting clients with optimising process design, operation, and maintenance to ensure seamless performance and compliance with industry standards.

We offer multidisciplinary expertise, including Mechanical & Piping, Civil & Structural Engineering, and Process Safety, ensuring comprehensive solutions for complex engineering challenges. We work closely with you to develop tailored strategies that improve operational reliability and cost-effectiveness.

Whether you need design assessments, system improvements, or process troubleshooting, our specialists deliver practical and results-driven engineering solutions.

KEY PROJECTS

EXPERT REVIEW - PROCESS AND CHEMICAL ENGINEERING

CHEMICAL ENGINEERING

- ✓ Thorough assessments of project design, scope, and cost estimates to ensure feasibility & efficiency
- ✓ Analysing potential risks and recommending improvements to enhance project safety & reliability
- ✓ Ensuring designs and operations meet industry standards, regulations, and safety requirements
- ✓ Identifying technical issues within processes and providing practical solutions to resolve them
